### Summary

This is a generic shallow storage box that holds loose hardware, tools, or small objects. It has eight compartments.

This is my design for a basic storage box. It was remixed to be shallower for smaller objects. It has clips that seal the lid to the box. The total profile of the box is 200mm x 204mm x 45mm(both base(35mm) and lid(10mm) together). There are four compartments that are 42mm x 93.5mm and four that are 45.25mm x 100mm. No supports are required if the lid is flipped during slicing. 1mm tolerance built in. I do not know what settings to use for printing it, but generic settings should work. I do not currently have a FDM 3D printer to test this model.
