### Summary

I always wanted to share the original film processor that I created years ago...

I always wanted to share the original film processor that I created years ago...

Its design was clunky and difficult to build, I finally found the time to simplify it

making it easy to print and easy to build. Here are the files :)

I also offer the hardware kits and full kits in [my shop here](#):

You have three choices to build one:

- buy the full kit with printed parts.
- buy the hardware only and print the parts yourself.
- Or simply source and print everything yourself :)

The parts list is in the files section with the assembly instructions.

The motor controller, power plug and motor don't have specific reference numbers to them so please look at their pictures to source the right parts.

I hope this will help our analog photography community.

[Please check out my blog about the history of this machine here.](#)
