Storage box for bits and bobs embossed or debossed with the Ender logo on the end of the box and either the ender logo or ender logo + Ender on the lid.

Slots into the 4040 vslot on the Y axis.

In the pictures you can see I have mine where the control panel used to be (I do not use the control panel and only use Octoprint), but it can be mounted on the other side or even behind.

Printing

No supports required.

Print the box lid smaller face down with the emboss/deboss facing the top.

For the box print on its end with the emboss / deboss face at the top.

The inside of the will not be pretty, it will push your printers bridging capabilities however you do not look at that part anyway, so it is not really a problem.

Check out my other stuff & follow!

Feedback and Makes

I really like getting feedback and despite having thousands of downloads I have only 1 comment and 0 makes!

It really makes a difference and feels great when you leave a comment, like, or collect things to the people who post them, so Please do that for all people as it builds community. Super important in these Covid Times. Even if you do not post things you are still part of the community (in fact you are the majority of the community), so please like, collect and comment!

Please do this for all stuff you download from everybody!
