This is a pencil holder with an open and modern design. You can easily see which pen you are taking, and you can put some little things at the bottom like paperclips.

To print the model with the integrated support you need to enable thin wall detection in your slicer. At 0.15mm layer height it take about 4h to print on a MK3s. The support can easily be removed with a precision knife.

I also put a version without the support if you prefer using your own supports. The new organic supports seems to be working very well, and are even easier to remove.
