Requires a pair of M3 screws to assemble. (Use at least 16mm length, but longer lengths should be fine.) A single M4 or M5 screw + T slot nut can be used to hold it to the extrusion, but this probably isn't necessary if you don't expect your printer to get bumped or otherwise moved much.

Print instructions

Supports aren't needed depending on print orientation, but note that ideal orientation is different for both the front and rear sections.
