Hi guys

This is my first thing i made, when i had my first 3D printer. I made this for my dads truck, because the original caps from Krone trailer were thin and when winter striked it got broken.

This caps are thight fit and over 6 months still looking great.

There are two files one is longer bolt cover and shorter, one was meant for truck and one for the trailer.

More pics incoming.. (blue is the first test print)
