Summary

Cleaned up and edited the original mount so that the magnets now meet to keep the door open.

[3D Printers](#) > [Accessories](#)

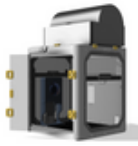

Fairly simple Wyze Cam v3 mount for @thrutheframe's ARC enclosure. Replace the top door hinge with the camera mount and the bottom hinge with the included hinge.

The magnet holes are pushed out and angled so that the door will still be held open instead of being blocked by the camera mount.

You might want to move the light, or turn it off if you don't need it. I moved mine to the front and it looks a lot better. Pictures of both included.

Simply mirror the mount if you want the door to open to the left.
