Fits a 3010 (30mm x 10mm) 12V fan to the vent slats around the controller board.

Useful for providing a bit of air flow around the X & Z motors as well as the controller board.

NB: It's a little tight (fan rubs a bit) so consider this a work in progress.

Screws used are M3x8mm self tapping screws. Really should have been longer, but longest suitable screws I had at hand (screw heads need to be wide enough to not go through slot).
