### Summary

You wanna print on custom sheets, detected as PEI sheet? For the printer only counts the QR code as you see in the video

Use whatever sheet you like with the BambuLab X1 X1C P1P, be detected as PEI sheet...

Made a video about that beginning of 2023, just a few days after I received my X1C:

The BambuLab X1C detects the “china” cheap sheet as original PEI sheet and starts the print.

Or maybe you like Pertinax or G10 as I do, with the sticker it is detected as BambuLab PEI sheet.

This makes it super simple to use whatever sheet you like, be detected as original PEI sheet.

printed mine on a laser printer, a friend printed it on an inkjet and both working just fine.

Just watch that your program, you print the sticker, does **not auto-scale** the sticker or it might be too big. The Original QR code width is ~5x5mm (4.7x4.7mm). The QR is the second symbol from the left. First the BambuLab Logo, then the QR Code :)

Where you have to position it, both side, you can see it the thumbnail of the video, or the picture I uploaded for the backside.

Happy printing
