Custom Airbrush Holder Racks For Kaizo / ES600 Water Curtain Spray Booth. This should work on most airbrush booth systems with acrylic wall's. Allows holding up to 3 airbrushes per rack. I included two variations, the smaller one will work with most airbrushes, including ones with regulators. The larger one is for airbrush gun's and larger .5 mm airbrushes.

I went through several variations to create the uploaded version (V3), which included thickening the edges and realigning the holes to be more compatible with Iwata and Mr Creos various brushes. I used some small screws to mount it, and a Dremel to drill into the acrylic wall. I will be making a set of paint holders next for each of my fav paints, comment if you would also want me to post that and with brand paints you want covered.

Model files

ab-holder-v3r.3mf

☐ Keep in mind there are two sizes, most airbrushes will use the smaller size rack.
