### Summary

A slight bugfix of "Desiccant Spool Tumbler" <https://www.printables.com/model/436044-desiccant-spool-tumbler>.

Tags: [spool](#) [dessicant](#) [dessicantholder](#) [spooldessicant](#)

The main body of <https://www.printables.com/model/436044-desiccant-spool-tumbler> has a horizontal plane which isn't very stable if printed with zero top layers. I've converted this to a cone so it isn't considered as a top layer anymore.

Print with 4 walls, 20% lines infill and 0 bottom/top layers. I've found the lines infill of Cura with crisscrossing at different angles very good at holding the desiccant while letting air thru.
