Summary

A portable bidet that can be carried in a bag.

[Household](#) > [Bathroom](#)

With the frenzied stockpiling of toilet paper, I thought it would be important to have an alternative. Use this Portable Bidet with a standard plastic water bottle. Just fill the bottle with clean warm water, snap on the top, and squeeze the bottle to clean all your tender bits.

The o rings were printed out of Flex and the base out of PLA. Print out 2 rings to create a tight no-leak seal.

The portable bidet is small enough it can be carried discreetly in a pocket or bag.
