I made a tool to clean the 3D printer nozzle when it gets dirty.

This tool uses three cotton swabs to surround the nozzle and wipe away any dirt.

Wipe a swab around the nozzle in a circular motion.

Nozzles are consumables. Please replace it each time you use it.

Use Johnson & Johnson swabs. Cut the swab stem in half and insert it into the tool.

The nozzle must be heated to a temperature that melts the filament before use.

- If the length of the cotton swab does not fit the nozzle, you may be able to use it by cutting the cotton part of the cotton swab shorter with scissors.
