Tags: [handle](#) [grip](#) [bike](#)

These bike grips are a replacement for the original ones on my bike, and I have also included additional parts to create a complete bike grip. The grips are designed to fit bike bars with a diameter of 22.2mm, making them compatible with a wide range of bikes.

The main part of the grip is printed using TPU, a flexible and durable material that provides a comfortable grip and excellent shock absorption. When printing the main part, it's important to use a standing position with support and print slowly due to the fine details. A layer height of 0.2mm is recommended to ensure optimal quality.

The additional parts, including the rings on the sides and the cover, are printed using PETG. PETG is suitable for outdoor use. These parts add a pop of color and a sleek design to the handles.
