Just got my Flatline Fiber Co P.I.M.P and found out the patch that comes with it is designed to have inserts if you choose. I designed this printable insert based off my patch, if you find the lugs to be too large for your specific patch feel free to reach out and I can upload a second version with smaller lugs to be more accommodating.

I didn't rotate the model before exporting the stl so make sure to lay the flat side facing down.

The flat side is 0.8mm thick and the lugs are 1.4mm making 0.2mm the ideal layer height for the most consistent print.
