Tags: [ender5](#) [eva3](#)

In adapting the Eva 3.0 toolhead for my Ender 5 I needed to adapt it for a fixed endstop sensor on the right side and to fit my MGN12H rails. This model removes the endstop mounts from the left and adds a bumper on the other side. The bumper also serves as somewhat of a channel for wires.

This remix is based on

EVA 3 - Modular 3D Printer carriage platform
