Summary

Small bracket with a peg on one side and a threaded large thumb screw on the opposite, for hanging light loads

[thumbscrew](#)

I needed a discrete-ish way to hang my wired ear-pod style headphones under my desk at work. I wanted to mess about with the thread function in Fusion 360, so I cobbled this together.

Designed to fit around a 1 1/2" square desk leg, the thumb screw tightens against the leg and holds the bracket up, and the peg protrudes to hold your item. Definitely not a high-weight solution.

Printed in PLA with supports for the threaded hole and the peg.
