A small and robust case for **DJI MINI 2**, **DJI MINI 2 SE** and **DJI MAVIC MINI**. It's perfect for when you just want to pack your drone in your bag or backpack. It is lightweight and protects the drone from damage and scratches.

To install the hinge, simply insert a small piece of filament into the hole provided. When slicing, it is recommended to ensure that there is no support material in the hole, as my experience has shown that it is otherwise difficult to remove. It is also very advantageous to place the lid of the case on the side of the print bed when slicing to improve the stability of the clip (as you can see in the following pictures). I also put a small piece of foam on the bottom of the case. This keeps the drone from slipping and protects the front of the drone.
