Summary

Tripod

Gadgets > Photo & Video

- On the pictures you can see the first version. In the files, the models are improved and functional.
- The individual parts have to be glued together as shown in the pictures. It is difficult to screw the screws into the screw handles, but they are fix afterwards without glue. To attach the legs you can use small wooden poles or metal rods.
- To make the screw that supports the camera more stable, I made a hole in it and then put a piece of a nail in with glue.
