Spyro the Dragon rendered 3D model from the "Spyro reignited trilogy" in a sitting pose / waiting pose + Keychain buddy version.

I was asked: "Hey can you make a smooth and compact pose for the use as a key-chain buddy".

The blender rendered model is very smooth and perfectly for printing on an SLA / DLP resin printer.

But also for FDM it is a great model.

If you want to use it as a Key chain buddy I highly recommend to use Flexible materials such as TPU or flexible resin.

## Features:

- Very detailed and smooth model
- Thin areas such as the Wings are modified to be easy printable
- flat surface to be perfectly fit on the printbed
- 2 Versions: One normal version and one Version with a hook for a keychain

As I am a fan of MMU printing yes there will be later also a MMU version so stay tuned.

Spyro the Dragon © by Activision for personal use only!

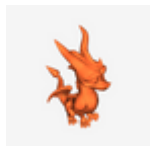

## Print instructions FDM print:

Support material under the mouth and wings and some small on the belly.

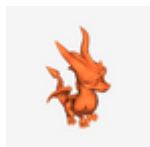

## SLA/DLP resin print:

Set at an angle that the wings are vertical and then place some support pillars under it.
