updated 24. 4. 2023 | published 24. 4. 2023

Summary

Took the original caliper, mirrored it so you can measure the inside of a helmet and the outside of your own head.

[Costumes & Accessories](#) > [Cosplay & Costumes in general](#)

The original caliper is nice but it can't do the inside of a helmet and when you put it together, it fits sort of unevenly.

By adding an inside measurement piece the part is now perfect when assembled.

You still need the M3 bolt and wing nut as i didn't change that.

Am printing right now and will update with a picture soon...
