This is my P1P poop chute. There are many like it, but this one is mine.

It needs less than 50g of material (supports included).

It's held in place by one of [these magnets](#), since I already had some lying around.

Update: I've also added a variant that uses 6x3 magnets instead.

Model files

p1p-poop-chute.3mf

p1p-poop-chute-with-6x3-magnets.stl

☐ This version uses 4 smaller magnets, likely easier to source
