## Summary

Basic magnetic cable tie and optional base.

Tags: [cablemanagement](#) [cableholder](#) [cableorganizer](#)

Basic model I cooked up since I couldn't keep waiting for the LTT version to release and was learning how to create my own models. The magnet holes are designed to fit 10X2mm magnets.

Printing Instructions: I suggest Printing the arch on its side to avoid any warping from overhangs. In practice, this yielded the least amount of warping and increased the strength of the print.

Notes and Flaws:

The default magnets, in my case, were not strong enough to hold the cables for my desk. I had to stack additional magnets until they held.

I suggest instead mounting a metal plate to your desired surface instead of relying on the base plate. This will add extra hold strength to accommodate more cables or more weight.

Please feel free to remix to your needs. This is a relatively simple model but it is functional.
