Nintendo 64 controller tray

I made some remixes of the awesome Catch-All Trays made by @HD_218561 to use them for my game controllers.

These are made to fit the controller and the cable neatly. It is definitely not most space efficient way to store controllers, but i like the way it looks and how easy it is to just throw them in.

I have printed all of these on my Bambu X1 Carbon with 2x AMS units. Some models require more then 4 colors to print. Also you can change the logo/text height in the 3mf if you want to save print time.

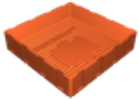

This remix is based on

Catch-All Trays / Desk organizer
