This 3D model is a simple and practical solution for those who use home automation or just prevent use of the switch. It is a cover designed to fit over the cord rocker switch of most small lamps, including the IKEA Architect Lamp. This prevents accidental turning off of the light when the light is remotely controlled via a smart LED bulb or when the light is turned on/off at the wall switch.

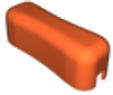

The cover follows the organic shape of the switch and fits snugly over the switch body with friction hold. It is easy to remove when needed. Additionally, it is compatible with a wide range of cord switches beyond IKEA's.

Add this 3D model to your lamp for peace of mind and ease of use.

>> **Please leave a like and make me happy... :) Thank you!**

**Printing tips:** Can be printed without support - the interior will be rough but the function will be preserved.
