A simple wand that holds strips of microfiber cloth to clean those hard-to-reach spaces.

A multi-use tool with two different edges that can be used to pry off plastic trim or scrap out dirt and debris. This is perfect for cleaning the vents in your car!

Just cut up an old microfiber cloth and pull it through the holes of the wand.

Trim your microfiber to the desired length and get to cleaning!

Strips should be 10 - 20 mm wide and whatever desired length.

The hole thickness comes in 1.5 mm and 2.5 mm thicknesses to accommodate heavy-duty cloth.

Make sure you use good quality microfiber clothes that don't fray. If your cloth is fraying, try cutting in a different direction (with the grain).
