Summary

needed a way to connect my cable chain to this extruder cable reposition holder, couldnt find one so I did a thing.

So recently I had my extruder cable kink and completely disable my S1Pro due to well another model that didn't work very well. Word to the wise. This holder is tested and proven now to work by yours truly. its a nice open bend But I wanted my connection to the cable chain im using to be more secure this this little baby was born.

I added this adaption of guys 3.2 version of his extruder holder found here https://www.printables.com/@Bananenminist_401847 Which by the way check out that guys page he's a creative super involved maker (if you see this guy thank you so much for this build it literally saved my printer.)

UPDATED i forgot to add the damn clip ahaaaaaaaaaa yea just psh ignore the awkwardness here....
