Summary

Designed with a flat front for better scooping abilities.

Tags: [bath](#) [scoop](#) [lego](#) [scooper](#) [jug](#)

The model was actually designed to scoop water out of the bath for a more economical toilet flush but I'm sure it could be used for many other uses like a lego scoop for example.

I printed this in pla but naturally it would perhaps be stronger in ABS/ASA.

It was also designed to be printed with 4 perimeters at 0.6mm nozzle width. I used a .4mm cht nozzle and just changed the line width in cura to 0.6.

You could also increase the wall line count beyond 4 if you want a nice strong handle.

As for supports you could possibly print this with zero supports but I added tree supports to the top(underside) of the handle to be safe.

Fits on a 180x180 bed, height however is 200mm
