updated 22. 12. 2023 | published 22. 12. 2023

### Summary

remixed as I wanted a spool holder that could come forward from the top of my Voron.

[3D Printers](#) > [Other Printer Parts & Upgrades](#)

Tags: [spoolholder](#) [voron](#)

I needed a spool holder that came out front of my voron as it on a shelf with not much space above it, and reaching behind or beside is a pain. I don't like PLA, etc going through the bowden tube, and the door has to sit open when printing PLA/PETG anyways.

Added two new files, can now add a guide. Could probably screw the guide directly into existing models as well (drill pilot hole recommended).

New mount has a hole for a standard voron heatset to be pressed in for 3mm bolt to be used.

### This remix is based on

## Voron 2.4 - Top mount single / dual spool holder
