This mount is made for mounting the beta version of the TradRack to your Voron under a 45 degrees angle so you can efficiently run your bowden tubes to your TradRack without putting too much stress on your Bowden with the filament inside it is adjustable by 1cm to change the mounting width in case someone has a layout that's only a little off also, possible to mount it on top without the spacers

needed parts:

4x m3 tnut

4x m3 bolt 15mm

4x m3 bolt 20mm

4x m3 locknut 15mm
