Summary

A lamp that can be controlled by hand gestures, in the shape of a lighthouse, full of fun.

[Hobby & Makers](#) > [Electronics](#)

A lamp that can be controlled by hand gestures, in the shape of a lighthouse, full of fun. An infrared distance sensing module is used in front of the lighthouse to control the on and off of the light. When in standby, the LED light on the top of the lighthouse will flash, of course, you can use Morse code to make your LED light show certain content, which is more interesting. Program control is realized through mcro:bit.
