Summary

Optimising the process of peer reviews with a coinflip.

Tags: [coin](#) [flip](#) [academia](#)

Peer reviews seem like a coinflip for a reason. These coins optimizes the review process by eliminating the tedious reading part. After selecting whether or not the current paper deserves a chance, select the appropriate coin, and flip!

Print upright on the edge.

Please note: This model is a **JOKE** and should not be used for actual reviews. The use of dice in the review of scientific papers has been widely regarded as a grave offense within the scientific community. The detrimental impact of this practice on the integrity of scientific research cannot be understated. Those who engage in such practices may be seen as contravening the fundamental principles of scientific inquiry and may thus be viewed as deserving of a special place in hell, where they shall suffer the fiery brimstone of eternal damnation.
