Cells are the building blocks of life. Nowhere is it more evident than in bees, the guardians of life. They build their hives forming cell-like, hexagonal compartments. This bracelet emulates life itself.

It may not be a coincidence that the same pattern appears on Prusa packages... We can all be makers.

## Print instructions

It is a simple print, you only have to use the color change feature in Prusa Slicer.

Then you should use warm water (60°-70°C or 140°-158°F) to heat and bend the bracelet to fit your wrist. Optionally, you can use the part.stl (scaled accordingly before print) as a guide. For the part.stl use a filament with higher glass transition point than PLA (e.g. PETG).
