Re-mix of Tina2 spool holder by https://www.thingiverse.com/doctor_vactor, to move it back to the rear of the printer so larger spools don't block the extruder.

I printed the original, but the filament always got blocked from loading into the extruder correctly because the spool blocked it. I only used the screw holders section (cause I was too lazy to measure for my self) then erased the holder cylinder, and made a new one in OpenSCAD farther back and higher to help the spool clear the extruder better.

This remix is based on
