While making the mesh pattern for my mid century birdhouse, i had the idea to make some planters with it.

100% support free

Super easy print, no supports and it is made with a 0.3mm layer height in mind for faster prints.

10cmx10cmx10cm

Two mesh patterns included: regular and slim.

Regular: Yellow on the pictures

Slim: Orange on the pictures

The slim one gives a real cool shadow effect by creating a space between the mesh and the planter body, but its more difficult to glue in place. You will need to put glue on the edges around the mesh only. With the thicker

one, you can put glue on the rear face instead... But the slim one is worth the effort.

Simply print 1 planter and 4 mesh patterns of your choice.

Glue the patterns all around the planter and voilà! That's it, back in the 60's... 😊

Again, any questions, suggestions or ideas?: Send me a message!

Happy printing folks!!!! 😊😊
