---

I broke my Component Catch while pulling 9mm and so I quickly designed and printed a new one. This doesn't have the ribbing like the original to attach a hose to as I never used that.

Needs to be printed in a durable plastic (Maybe ASA or ABS). I printed in PLA as I don't have a proper enclosure for ASA or ABS. PLA broke in a couple of throws of the pile driver, maybe if printed sideways with supports it would last longer.
