Remix of [@Yume's excellent Sunlu 250g spool adapters for Bambu AMS](#).

I had the male side of the spool adapter snap off when my AMS tried to feed filament without turning the spool. I superglued it back on but it snapped off again so I edited Yume's design to add strength. I just added 3mm inside the spool center to give it more strength against torsion. I also upped the infill to 30% for more strength. The two spool sides can still nest together.

This remix is based on

Spool Adapters for cardboard or 250g spools to work with Bambu Lab AMS

by Yume
