updated 30. 12. 2023 | published 30. 12. 2023

### Summary

I designed a front panel for my PC case to replace the closed off aluminum one that gave it little to no airflow.

Feel free to remix this design or use it for yourself if you recognize the case it belongs to.

A wire mesh can be hot glued to the inside to prevent dust from getting inside.

## Recommendations:

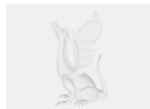

The parts I have now just barely fit on an ender 3 V2, A CR/BL touch can prevent you from printing this on an ender 3

.20 layer height

100% infill

0.6 nozzle is highly recommended to save time with printing.
