I often have difficulty removing my coin from the supermarket shopping trolley when I'm returning it. This maybe just me, though you may struggle, too. To help me with this situation, I've created a modified shopping trolley token, shaped to match the \$2 coin, but with a difference. My token has an extended part for my fingers to grip onto and help me to remove the token.

The token is made to match the Australian \$2 coin, 20.5mm diameter and 2.8mm thick. Your token size needs may vary, depending on which part of the world you are in and the coin size you need to match. Leave a comment on your needs, and if there is enough interest, I will add some size variations to match.

This is a tweaked to a previous shopping trolley token of mine. The keyring hole is moved a little further away from the edge to make it stronger. I've kept the previous shopping trolley tokens available to suit people preferences.

I hope you can find this print useful, too.

Remember to leave me some feedback or even a tip to keep me enthused to make more of these drawings.

Print instructions

My print is made in PPLA 1.75mm Aurarum gold filament, with 0.2mm layer height and 20% infill on a PRUSA I3 MK3S printer.
