Super fun toy rocket with launch pad. Created for my kid who loves it and uses it in the bathtub frequently. My latest iteration includes a little stronger infill on the legs as they tend to want to break if played with hard. I also switched to organic supports instead of rectilinear which Cuts about 2 hours of time. This is my first design after getting my first printer. Also used it as a learning tool for figuring out how to use Fusion. 360. Enjoy!
