updated 26. 4. 2023 | published 26. 4. 2023

### Summary

A remix of a KP3S Pro bed levelling thumb wheel, now with more grooves.

[3D Printers](#) > [3D Printers - Upgrades](#)

Tags: [bedleveling](#) [kp3spro](#)

I really liked the bed levelling thumb wheel with locking clip by [Big E](#), but thought that it could do with a few more grooves for extra resolution when levelling. I also really like the look of the extra grooves.

The clip is the same as the [original model](#), so you won't find that here...

You'll also need four M4 nuts and four M4 washers.

Printed in PETG, with pretty standard settings (I think I did 0.3 mm layer height and 3 perimeters).
