updated 26. 4. 2023 | published 26. 4. 2023

### Summary

This small part pushes the Lightning connector out by about 2mm, so you can charge the iPhone including a case.

This small part pushes the Lightning connector out by about 2mm, so you can charge the iPhone including a thicker case.

However, this still requires a small adjustment to the cable itself. There, the insulation has to be cut off a bit - best with a razor or cutter knife:
