Summary

Overly complicated clip to hold the USB cable in place on your Kingroon KP3S Pro.

Tags: [usb](#) [usbholder](#) [kp3spro](#)

I've had a couple of prints fail due to my USB cable being pulled out of the printer (I print with Klipper). So, I made a clip to hold it in place.

The top part will need supports, other than that there are no specific print settings needed. PLA might be too stiff and brittle so I suggest to print with PETG.

Once printed, put the USB B port in the clip and attach it to the ventilation slots on the printer.
