A peanut butter holder for bird feeding. As most of you might know birds really love peanut butter. My father in law made a version from wood and I really liked it, but my woodworking skills are not on par with his, so I choose a version that better suits me :-).

The piece of string is used to prevent the birds from pulling the jar out of place. I specifically designed the pole for the birds to sit on to extend only a little longer than the poles that hold the jar so larger birds wont become to comfy for too long (that was a problem with v1 of the feeder :-). I also gave it a coat of clear varnish to protect it from the wheather.

Print instructions

Because the rods must be able to hold the weight of the jar and bird(s) 3 or more perimeters are highly recommended. Other than that I used the Prusa 0.20mm quality profile.
