Summary

Connect a US garden hose to most RV dump stations

[Household](#) > [Outdoor & Garden](#)

Tags: [rvcamper](#)

Our RV uses a garden hose for the gray water hookup. I designed this to mimic commercial 4-in-1 sewer hookups: 4-inch NPT, 3.5-inch NPT, 3-inch NPT and 3-inch slip fitting. I added some tabs to help screw/unscrew it for the NPT fittings.

Updated 3rd version: Uses a 90-degree garden hose elbow ([Amazon](#) or [Home Depot](#)), which is less prone to clog than a swivel connector. You will also need a double female adapter ([Home Depot](#)) to connect the elbow to the garden hose. Print it with the flat side down, with support enforcers on the build plate underneath the hose connection; no supports are needed below the rest of the funnel. I used PETG, but ASA would also be fine.
