I was tired of buying new TPU bands for my fitbit that would inevitably disintegrate after a year or two so I set out to model my own adapter. I ended up creating this PLA adapter for standard 22mm watch bands.

Print as oriented with support in PLA. They didn't always fit perfectly and although my final version did fall off once in the first few days it's been holding strong for a few weeks now.

I printed a copy in TPU and it flexed right off the fitbit, I don't know my TPU's spec offhand so if you have success with this please let me know! F3D and STEP files provided in case you'd like to expand on my reverse-engineering.
