Designed to be a cheap, simple, and easy print!

This necklace is for FDM or SLA printers... just in time for the holidays for that special someone ;)

Once printed, just attach a metal chain between one of the honeycombs to make it into a necklace.

Can be printed with exotic filaments or even spray-painted with "metal-looking" paint to give it the metallic jewelry look.

### Print instructions

0.10mm layer height  
100% infill

\*Ensure "detect thin wall" and "extra perimeters if needed" are both checked under PrusaSlicer's "Print Settings" tab.

If looking for the gold-black look like in my renders, just set a layer change in PrusaSlicer to change from the base color to the top layer color.
