### Summary

Intended for headless setup (Moode, etc)

[Gadgets](#) > [Audio](#)

Tags: [raspberry](#) [pi](#) [zero](#) [w](#)

Fits a Pi Zero (W) and Adafruit DAC perfectly (<https://www.adafruit.com/product/4037>)

Nice for running a headless media player like Moode

Probably close or fits other HAT DACs also

...also, in my direct experience using a switching input, I can't hear an audible difference between this and the Schiit Modi 3+ (<https://www.schiit.com/products/modi-plus>) using the Magni+ amp and DT770 headphones.

I think that's a decent fidelity audio chain

When you're talking about speaker amp, with speakers, in a room... well. I'm super comfortable calling it a day at this \$9 DAC. It's great.

We're lucky to live in a world with this kind of audio quality value!
