May I introduce Bag Bird to you.

Bag Birds lives in shirt bags - but they like collars as well.

With it strong magnets Bag Bird can help you to hold a memo.

And it is able to carry (magnetic) coins, nails etc..

You also need:

- 3 neodymium magnets (I used the magnets of a broken prusa heatbead, uups!)
- 2 6mm steel balls for the eyes.

Mount the magnets with super glue into the recesses, push the steel balls into the eye holes. Click the beat into the holes at both sides of the head. Ready for take offffff!!

## Print instructions

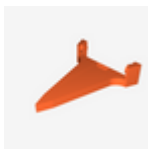

No support or brim needed.

Please keep in mind that the gcode file for the bird includes a color change!
