This is a phone mount intended for a LG G7 ThinQ to be placed at the end of the Ender 3 Pro. I personally use my old LG G7 with Octo4a to make my printer wireless. I like the position this places the camera of the phone as it allows me to see the entire build plate.

I used Inland PLA+ when printing it but any filament should do.

Supports are needed for the arm but the bracket should not need any supports.

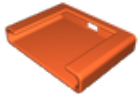

This model is open to remixes and please feel free to recreate the bracket for your particular phone.

I hope enjoy this print as much as I have! Good luck and have fun!
